

Health is very important to us, although safety must come first.

A juice bar for your home.
Comfortable, safe and open 24/7.

The first to protect your health with fresh vitamins and safety.

It has never been simpler, more efficient or safer to make fresh fruit and vegetable juice than with the juice extractors. The innovative Active Motor Management protects you from hurting yourself on the rotating filter basket. The juice extractors can even process whole apples, for example, thanks to the extra large filling hole. And the 700 watts of power and micropore microfilter strainer guarantee optimum juice extraction.

Integrated safety features.

When the secured lid on the appliance is opened using the side brackets, the filter basket automatically comes to a stop within seconds. The appliance cannot be turned on again until all the parts are assembled correctly.

Stainless steel for top quality.

The microfilter strainer, shredding disc and juice outlet are made from stainless steel to ensure a long service life, simple cleaning and optimum hygiene when juicing.
